China National Radio: [Kuaishou AI Future Creators Challenge Officially Launched, Building an AI Innovation Practice Platform for University Youth](#)

On July 17, the Kuaishou AI Future Creators Challenge was officially launched at Dalian University of Technology. Gao Xiang, President and Deputy Party Committee Secretary of Dalian University of Technology, and Yang Yuanxi, Co-founder of Kuaishou, attended the event and delivered speeches. Hosted on the iCAN innovation and entrepreneurship competition platform and open to enrolled students from universities and research institutes nationwide, the competition centers on the theme "Intelligent Creation for the Future AI World" and features two tracks — "AI Scenario Imagination" and "AI Product Realization" — encouraging young students to draw on real-life, study, work, and social needs to envision future AI application scenarios, propose innovative solutions, and create works. By combining its platform ecosystem, AI technological capabilities, and content distribution strengths, Kuaishou aims to build an AI innovation practice platform for young students that spans the full journey from idea generation and content creation to showcase and exchange.
