

## **Kuaishou Security Incident Emergency Response Regulations**

These regulations aim to efficiently handle the Company's information security and privacy protection, establish a standardized emergency response process and clarify the responsibilities and division of labour of parties involved in related incidents, in order to ensure timely, consistent, effective and reasonable management of information security and privacy protection, to prevent and reduce losses and harm caused by such incidents, and to maintain the sustainable, stable and healthy development of the Company.

These regulations are applicable to the handling of all security and privacy compliance incidents of Kuaishou and its related companies.

The Security Incident Emergency Response is based on the "Security Incident Classification and Grading Regulations" and "Security Incident Handling Process" protocols. Upon the report of any emergency incident, the Company shall respond quickly to complete the emergency process as soon as possible, and review and summarize the emergency process to conclude a "Security Incident Emergency Response Report".
